"Words" from Owners & Contractors

- *"What is 3D machine control?"*
- *"Our owner insists on analog job site reports"*
- *"We don't get real time data from projects"*
- *"The design offices rarely provide us with 3D models"*
- *"We would like to provide construction companies with 3D models, but most of them cannot use the data"*
- ...

" The great hope of society is in individual character. "

William Ellery Channing

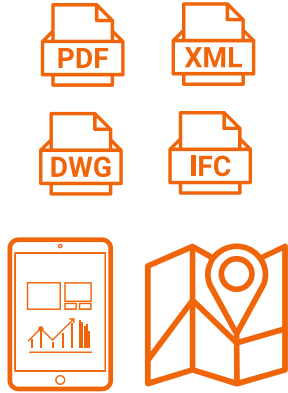

Vision

What needs to be done to enable the successful and sustainable execution of infrastructure projects?

DESIGN

Bentley®

AUTODESK

Trimble

Other
CAD-software

CONSTRUCTION

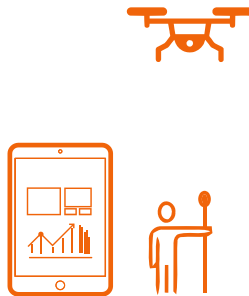

Xsite® Leica
Geosystems

Trimble® TOPCON

Other systems

INITIAL DATA

REGISTERS

DIGITAL
HANDOVER
FOR
MAINTENANCE

Infrakit benefits

Share real-time information between all parties to ensure project success

Access visual location-based documentation to improve quality control

Enjoy mixed fleet management on a single platform to increase on-site efficiency

Summary

We are seeing more tenders where design offices need to showcase BIM references in order to participate.

During the project execution, a lot of technology like machine control, drones, and scanning are already being used by contractors.

To ensure the best quality and most efficient execution of infrastructure projects, it is now time to utilize the right information on a platform that is specifically designed for this business
